User must receive an error message and account registration process must be stopped

Test Case

Title/ID: TC002 – Verify if user can sign In with a corrupted account

Preconditions:

- User must be logged out
- User must to be on login page
- New account with corrupted data
    - Adresa de email: sodecej497@caps7.com
    - Parola: ParolaTare!

Steps

1. Complete all fields with dummy data
2. Press button “Autentificate”
3. After user is redirected to home page, verify if user navigation buttons is shown
4. Refresh page and verify if user navigation buttons is shown

Expected Results:

User can’t authenticate or if pass the authentication process, user shouldn’t be logged in, because is an invalid user.

Test Case

Title/ID: TC003 – Verify if I can add an address with first or last name emojies

Preconditions:

- User must be logged in
- User must be on Customer Addresses page
- New address with corrupted data
    - Nume: 😄
    - Prenume: 😄
    - Numar de telefon: 0770777666

Steps

1. Complete all fields with corrupted dummy data
2. Press “Salveaza Adresa”
3. Press button “Ma inregistrez”

Expected Results:

User must receive an error message and address isn’t save

Describe minimum 2 testing tehniques.

1. BlackBox Testing

This technique focuses on the functionality of the software without knowledge of its internal structure. Testers verify the system's behavior against the requirements.

2. Error Guessing

Based on the tester’s past experience, it involves guessing potential error-prone areas and designing test cases accordingly.
